Retro Permit Limitations (Check box below on type of retro work being preformed and provide a description of work)

Retrofit permits are limited to projects involving fire alarm, fire sprinkler and kitchen fire system where the design is not required by the Fire Code Official. Fire alarm, fire sprinkler and kitchen fire system retrofit permits are permitted to be used on the same project. Plan review is not required and retrofit permits are limited in scope-of-work as follows:

- a. Relocation of 4 to 14 standard spray fire sprinkler heads.
- b. Addition of 3 to 6 standard spray fire sprinkler heads.
- c. Where 2 to 3 conventional sprinkler heads and piping are replaced with flexible piping and sprinkler heads.
- d. Addition of 3 to 10 initiation/monitoring/control devices to a fire alarm system.
- e. Addition of 2 to 5 notification devices of 75 candela or less to a fire alarm system.
- f. Kitchen hood fire system re-piping of the system for new appliance layout.
- g. Addition of up to 2 kitchen hood fire system nozzles with a maximum total of 3 nozzle flow points are allowed to be added to a system not exceeding maximum allowable flow points of the cylinder.

Fire alarm, fire sprinkler and kitchen fire systems exceeding the above listed parameters require design. A Commercial alteration permit is required.
