

# Anchorage Water & Wastewater Utility

## Anchorage Water & Wastewater Utility Organizational Overview

### Overview

The Anchorage Water and Wastewater Utility (AWWU) is the largest water and wastewater utility in Alaska. AWWU currently serves the Municipality of Anchorage extending from Eklutna to as far south as Girdwood. Although they share one workforce, AWWU operates as two separate economic and regulated entities: the Anchorage Water Utility (AWU) and the Anchorage Wastewater Utility (ASU).

*AWWU Headquarters*

### System Description

To provide water and sewer services, AWWU owns and operates five Treatment Facilities (2 water and 3 wastewater), approximately 1,600 miles of pipe, and over 325,000 square feet of facility space distributed throughout the Municipality. The certificated water service area covers 130.4 square miles in three distinct geographic areas, Northern Communities, the Anchorage Bowl, and Girdwood Valley. Estimates place the water service population at approximately 243,000 people via nearly 56,600 customer accounts. The certificated sewer service area is larger, encompassing nearly all of the Municipality. ASU currently provides sewer service to approximately 252,500 people via approximately 57,700 customer accounts. Additionally, AWWU receives septage pumped from on-site wastewater systems on lots in areas not directly connected to the sewer system.

*Ship Creek Water Treatment Facility*

AWU's three sources of water are Eklutna Lake, Ship Creek, and groundwater accessed through a system of wells in the Northern Communities, the Anchorage Bowl, and Girdwood Valley. Eklutna Water Treatment Facility and the wells which supply Girdwood are operated year-round and serve as the primary supply sources for the Anchorage and Girdwood water systems. The Ship Creek Water Treatment Facility and the remainder of the water wells are used to augment the primary water supply, mainly in times of peak demand, as well as provide redundancy to the Eklutna source for Eagle River and the Anchorage Bowl. Of these sources, the Eklutna Water Treatment Facility now provides approximately 92% of total water production for the Northern Communities/Eagle River and the Anchorage Bowl. In Girdwood, where system demand constitutes less than 2 percent of AWWU's total water production, all water produced and distributed is from two municipally-owned and managed wells.

ASU operates three wastewater treatment facilities (WWTF) to treat wastewater collected in three geographically separate but commonly managed sewer systems. The largest of these is the John M. Asplund WWTF located at Point Woronzof. The Asplund WWTF was constructed in

the early 1970's when Anchorage eliminated direct ocean discharges. It services the wastewater treatment needs of the Anchorage Bowl. The Asplund facility has received silver, gold, and platinum awards from the National Association of Clean Water Agencies for efficiency and environmental compliance. ASU is continually at work to maintain and enhance the facility. The Asplund facility operates in accordance with a National Pollution Discharge Elimination System (NPDES) permit administered by the U.S. Environmental Protection Agency (EPA). The permit, which expired in 2005 but has been administratively extended by EPA, allows discharge of effluent receiving primary treatment, in accordance with Section 301(h) of the Clean Water Act. AWWU is working with the EPA on permit renewal with ongoing efforts including additional data collection, mixing zone study, and other efforts to support the permit renewal.

The Eagle River WWTF was originally built in the 1960's and upgraded several times. It services the public wastewater treatment and disposal needs within Eagle River and Chugiak. The Eagle River facility provides biological secondary treatment and discharges treated effluent to Eagle River. The Eagle River Wastewater Treatment Facility Permit was renewed on March 1, 2020 by Alaska Department of Environmental Conservation (ADEC), which has assumed primacy from EPA over permits for wastewater discharge to fresh water and is valid for five years.

*Asplund Facility*

*Girdwood Wastewater Treatment Plant*

The third facility is Girdwood WWTF. It was originally constructed in the 1970's and also has undergone several process modifications and upgrades. The Girdwood facility provides biological secondary treatment and discharges treated effluent to Glacier Creek under an administratively extended NPDES permit administered by ADEC. The core facility is now at the end of its useful life. Phase 1 of plant replacement and upgrades was completed in 2014. Phase 2 of the plant replacement and upgrade is being planned to conform to discharge requirements of a new permit.

Over the past decade, investments in physical infrastructure have resulted in an increase in the value of AWU and ASU. From 2010 to present, plant in service has increased by 32.0% from \$709.3 million to \$936.3 million for AWU and by 38.3% from \$554.6 million to \$767.0 million for ASU. This growth is primarily a result of an increasing amount of investment in transmission and distribution assets (water pipelines) and collection plant assets (wastewater pipelines).

## **Organization**

The General Manager's office is responsible for overall operation of AWWU that includes the following 7 divisions:

- Administrative Services Division provides for training, safety, and internal and external communications.
- Customer Service Division is responsible for responding to customer inquiries, billing and collections for both utilities, issuing of permits, and field service functions.
- Engineering Division is responsible for development and execution of AWWU's capital program and for system planning.
- Finance Division is responsible for all general ledger and plant accounting, preparation of utility budgets and financial statements, and regulatory filings.
- Information Technology Division provides support for all AWWU computers, network, and software systems.
- Operations and Maintenance (O&M) Division maintains the treatment facilities and repairs all water and sewer piping and lift stations. The O&M Division also operates the wastewater collection system and is responsible for AWWU's Supervisory Control and Data Acquisition (SCADA) system.
- Treatment Division is responsible for day-to-day operation of the treatment facilities and water distribution system and for maintaining compliance with all state and federal environmental regulations.

## **Anchorage Water & Wastewater Utility Business Plan**

### **Mission**

Providing safe and reliable water and wastewater service today and into the future.

### **Services**

Anchorage Water & Wastewater Utility (AWWU) is the largest water and wastewater utility in Alaska. AWWU currently serves the Municipality of Anchorage extending from Eklutna to as far south as Girdwood. Although they share one workforce, AWWU operates as two separate economic and regulated entities: the Anchorage Water Utility (AWU) and the Anchorage Wastewater Utility (ASU).

### **Business Goals**

AWWU prepared an updated strategic plan in 2016. The plan includes the following goals:

- Be responsive to the needs of the community
- Be the model of innovation and efficiency in service to the public
- Be a responsible steward of ratepayer funds
- Be the employer of choice for existing and future staff

### **Strategies to Achieve Goals**

AWWU has identified the following customer commitments which represent the outcomes or accomplishments of the Utilities' activities as viewed by the customer:

1. Provide safe drinking water that meets or exceeds all standards.
2. Protect the environment through appropriate wastewater collection, treatment, and disposal.
3. Provide reliable service.
4. Have timely, professional, and courteous interactions with customers.
5. Manage finances responsibly and transparently.
6. Set rates that fairly reflect the cost of providing service and maintaining infrastructure.
7. Deliver services affordably to promote a strong Anchorage economy.
8. Invest wisely to minimize risk and maintain service levels.
9. Continuously improve the efficiency of our operations.
10. Anticipate change and prepare for the future.

### **Performance Measures to Track Progress in Achieving Goals**

AWWU measures progress in achieving these customer commitments using quantifiable performance measures, including the following:

1. Compliance with all State and Federal drinking water, wastewater and clean air standards.
2. Number of planned and unplanned water outages.
3. Sanitary sewer overflows.
4. Number of reportable injuries and accidents.
5. Execution of capital improvement budget.
6. Debt to equity ratio.

---

## Anchorage Water & Wastewater Utility

*Anchorage: Performance. Value. Results.*

---

### Mission

Supporting the public health, safety, and economic interests of the community by providing quality water and wastewater services in a responsible, efficient, and sustainable manner.

### Core Services

- Reliably treat and distribute potable water for domestic, commercial, and firefighting uses throughout the certificated service area.
- Reliably collect, treat, and dispose of wastewater in accordance with laws and regulations that protect public health and the environment.

### Accomplishment Goals

- Provide reliable service
- Provide safe drinking water that meets or exceeds all standards
- Protect the environment through appropriate wastewater collection, treatment, and disposal.
- Fiscal responsibility and transparency with utility finances.
- Timely, professional, and courteous interactions with customers.
- Rates that fairly reflect the cost of providing service and maintaining infrastructure
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

### Performance Measures

Progress in achieving goals shall be measured by:

1. Compliance with all State and Federal drinking water standards
  - Wastewater standards
  - Clean Air Act standards
2. Number of planned and unplanned water outages
3. Sanitary sewer overflows
4. Recordable incident rate (as compared to the standard incident rate for water and wastewater utilities)
5. Execution of capital improvement budget
6. Debt to equity ratio

**Measure #1: Compliance with all State and Federal drinking water, wastewater, and clean air standards**

### Type

Effectiveness

### Accomplishment Goals Supported

- Provide reliable service
- Provide safe drinking water that meets or exceeds all standards
- Protect the environment through appropriate wastewater collection, treatment, and disposal.

### Definition

The number of regulatory requirements meeting compliance standards divided by the total number of regulatory requirements for the time period. The total number of regulatory requirements is the sum of daily, weekly, and monthly compliance standards.

**Data Collection Method**

All samples collected are compared with the State or Federal regulatory standards and any violations are noted and reported in accordance with permit stipulations.

**Frequency**

The percent compliance measurement will be calculated quarterly, using running totals for the calendar year.

**Measured By**

The Treatment Division will prepare a report from the water quality and laboratory databases that identifies any samples or reportable incidents that do not meet regulatory standards.

**Reporting**

The Treatment Division Director will update the report quarterly from the water quality and laboratory databases. The information will be displayed in tabular form.

**Used By**

The Treatment Division Director and General Manager will use the information to gain a clearer understanding of performance of AWWU’s treatment facilities and determine if changes in system operation or maintenance are required.

**Results**

Measure 1: Compliance with all State and Federal drinking water, wastewater, and clean air standards	Goal	2023				Past Years						
		Q4	Q3	Q2	Q1	2022	2021	2020	2019	2018	2017	
Safe Drinking Water Act Compliance (%)				100	100	100	100	100	100	100	99.8	97.6
Clean Water Act (NPDES permit) Compliance (%)				99.92	100	99.81	100	100	100	100	100	100
-Asplund				100	100	99.94	99.95	99.6	97.8	99.7	100	100
-Eagle River				100	100	99.88	99.93	98.95	99.7	99.3	100	100
-Girdwood				99.76	100	99.63	99.48	99.43	99.4	100	100	100
Clean Air Act Compliance (%) (Asplund Incinerator)				99.98	99.99	100	100	99.99	100	100	100	100

<b>Measure #2: Number of planned and unplanned water outages</b>
--

**Type**

Effectiveness

**Accomplishment Goal Supported**

- Provide reliable service
- Provide safe drinking water that meets or exceeds all standards
- Protect the environment through appropriate wastewater collection, treatment, and disposal.
- Timely, professional, and courteous interactions with customers.
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future

**Definition**

A water outage is defined as a disruption in service to a service connection. A service connection serves one customer, although multiple people may be affected by the disruption in service to a residence or a business.

**Data Collection Method**

A tally is kept through each calendar month of the number of customers who experience planned and unplanned water service disruptions for a range of durations listed below. The outage is as reported to AWWU and confirmed by observation or analysis in the field.

**Frequency**

The measurement will be recorded at the beginning of each month for the preceding month.

**Measured By**

Number of customers who do not have water service for the following durations:

- Less than 4 hours
- Between 4 hours and 12 hours
- Greater than 12 hours

Disruptions are counted for planned activities (customers are given advance notice in writing) and unplanned (emergency) activities.

**Reporting**

The Strategic Asset Services Section will create a monthly report that will be show water outages numerically and graphically.

**Used By**

The O&M Division, Customer Service Division, and Strategic Asset Services Section and the General Manager will review these data monthly to evaluate adequacy of operation and maintenance approaches, customer service response and pipe condition.

**Results**

Measure 2: Number of planned and unplanned water outages (customers per month)	Goal (Affected customers per month)	2023 (monthly average)	4 <sup>th</sup> Q 2023 (monthly average)	3 <sup>rd</sup> Q 2023 (monthly average)	2 <sup>nd</sup> Q 2023 (monthly average)	1 <sup>st</sup> Q 2023 (monthly average)	Historical monthly average				
							2022	2021	2020	2019	2018
<b>Planned Outages</b>											
<4 hours	<20				10	0	3	1	30	11	10
4-12 hours	<20				0	0	6	10	23	37	16
>12 hours	0				0	0	0	3	0	0	3
<b>Unplanned Outages</b>											
<4 hours	<20				33	62	23	34	63	17	38
4-12 hours	<50				25	66	15	28	32	36	42
>12 hours	0				10	0	1	3	3	3	11

**Measure #3: Sanitary Sewer Overflows**

**Type**

Effectiveness

**Accomplishment Goals Supported**

- Provide reliable service.
- Timely, professional, and courteous interactions with customers.
- Protect the environment through appropriate wastewater collection, treatment, and disposal.
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

**Definition**

Total number of wastewater overflows onto the ground or wastewater back-ups into customer residences if caused by an obstruction in an AWWU sewer main, manhole, or cleanout. Overflows or backups that occur due to on-property blockages do not count.

**Data Collection Method**

The reportable number of sanitary sewer overflows is what is reported in writing to the EPA Region X office within a week of each occurrence.

**Frequency**

The measurement will be recorded each month for the previous month.

**Measured By**

Data collection is by direct observation by AWWU staff.

**Reporting**

The O&M Division will create a monthly report displaying overflow data numerically and graphically.

**Used By**

The O&M Division, Customer Service Division, and Strategic Asset Services Section and the General Manager will review these data monthly to evaluate adequacy of operation and maintenance approaches, customer service response and pipe condition.

**Results**

	Goal	2023				Historical monthly average					
		Q4	Q3	Q2	Q1	2022	2021	2020	2019	2018	2017
<b>Measure 3: Sanitary Sewer Overflows (monthly)</b>	<1.5			1.00	1.67	0.67	1.75	1.1	1.33	1.23	0.91

**Measure #4: Number of reportable injuries and accidents****Type**

Effectiveness

**Accomplishment Goal Supported**

- Provide reliable service
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

**Definition**

Number of OSHA recordable incidents multiplied by 200,000 (# defined by OSHA as 100 employees working full-time for a year) divided by number of hours worked by all employees. Compare Recordable incident rate to standard industrial rate (SIR) for water and wastewater utilities.

**Data Collection Method**

Accident and near-miss reports.

**Frequency**

Annually.

**Measured By**

Safety Program Manager, Administrative Services Division.

**Reporting**

The Administrative Services Division will maintain an accident and near miss report on a monthly basis. Data will be compiled, summarized, and reported at the end of the year. Reportable incidence rates will appear mid-calendar year.

**Used By**

The Safety Manager, all Division Directors and the General Manager will use the report to monitor and adjust working practices and focus training and attention to hazardous situations.

**Results**

	Goal	2022	2021	2020	2019	2018	2017	2016
<b>Measure 4: Number of reportable injuries and accidents (annual)</b>	<4.60	4.34	3.44	.858	4.08	7.1	4.45	6.30

Note: Bureau of Labor Statistics (BLS) will normally post the previous year's incidence rate during the months of June or July. AWWU falls within the utilities sector of electric power generation, transmission, and distribution; natural gas distribution; and water, sewer, and other systems.

Update - From the Bureau of Labor Statistics: **Important note on future data:** Beginning with the 2016 reference year, the Survey of Occupational Injuries, and Illnesses (SOII) will present a single release of national data on **November 9, 2017**. This release will include industry counts and rates along with case circumstances and worker characteristics for cases requiring days away from work. In previous years, these data were released separately. State data was released on November 28, 2017. A similar schedule will be followed in subsequent years.

**Measure #5: Execution of Capital Improvement Budget****Type**

Efficiency

**Accomplishment Goal Supported**

- Provide reliable service
- Fiscal responsibility and transparency with utility finances.
- Rates that fairly reflect the cost of providing service and maintaining infrastructure
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

**Definition**

The ratio (as a percent) of capital project dollars expended through the fiscal year divided by the planned expenditure for the year as indicated in the approved Capital Improvement Budget.

**Data Collection Method**

Project Managers input % complete data and expected completion dates for each project named in the capital improvement budget.

**Frequency**

Estimates of the completeness (% complete) of all ongoing projects will be reported through the AWWU Engineering Division Project Management group annually and with quarterly updates to yearly progress.

**Measured By**

The Engineering Division will keep track of this information using the ERP tracking and reporting system.

**Reporting**

The information will be displayed numerically and graphically in monthly reports.

**Used By**

The Engineering Director and General Manager will use this data to gauge progress on use of capital project funds.

**Results**

	Goal	2023	Historical Information				
			2022	2021	2020	2019	2018
<b>Measure 5: Execution of Capital Improvement Budget (annual)</b>	75%	14%	81%	72%	90%	46%	85%

**Budget, Expenditures, and Closures through June 2023**

**Measure #6: Debt to Equity Ratio**

**Type**

Effectiveness

**Accomplishment Goal Supported**

- Fiscal responsibility and transparency with utility finances.
- Anticipate change and be prepared for the future.

**Definition**

The relative percentages of assets that are funded by debt and equity, respectively. The total of debt funding and equity funding equals 100%.

**Data Collection Method**

The calculation is performed by comparing debt and equity to assets annually.

**Frequency**

The measurement will be calculated annually upon completion of the Utility's audited financial statement.

### Measured By

The Finance Division will calculate this ratio from financial statement data.

### Reporting

The Finance Division manager will create and maintain an annual report. Trend information will be displayed in a table.

### Used By

The information will be used by the Finance Division Director, General Manager, Board, and Administration to help evaluate debt financing levels.

### Results

<b>Measure 6: Debt to Equity Ratio (annual)</b>	<b>Goal</b>	<b>*2022</b>	<b>2021</b>	<b>2020</b>	<b>2019</b>	<b>2018</b>	<b>2017</b>	<b>2016</b>
Water Utility	67/33	51/49	54/46	56/44	58/42	60/40	61/39	62/38
Wastewater Utility	67/33	57/43	60/40	63/37	64/36	65/35	64/36	67/33

\* Fiscal year 2022 ratios are based on draft unaudited numbers.

**PVR Measure WC: Managing Workers' Compensation Claims**

Reducing job-related injuries is a priority for the Administration by ensuring safe work conditions and safe practices. By instilling safe work practices, we ensure not only the safety of our employees but reduce the potential for injuries and property damage to the public. The Municipality is self-insured and every injury poses a financial burden on the public and the injured worker's family. It just makes good sense to WORK SAFE.

Results are tracked by monitoring monthly reports issued by the Risk Management Division.

## **About Anchorage Water & Wastewater Utility**

### **Anchorage Water Utility History**

From the first intake of water at Lower Ship Creek, and a few miles of wood stave water lines downtown more than 100 years ago, Anchorage's public water utility has grown into an enterprise with a net plant in service of approximately \$936.3 million that delivers an average of 23 million gallons of water to customers each day. The original water system for Anchorage was installed by the Alaska Railroad in 1917. In 1921, the City purchased the water system and associated water rights from the Alaska Engineering Commission. As the City expanded by annexation, the water system was extended into new areas and independent water systems previously serving the annexed areas were acquired by the City. A 2.6-mile raw water line to Ship Creek was built in 1980 to replace an earlier raw water main originally constructed in 1962 for the Ship Creek Water Treatment Facility (WTF). In the 1950's, an aqueduct was drilled through the mountains north of Anchorage to supply water from Eklutna Lake to the Eklutna hydroelectric power plant along the Knik River. In 1985, the Anchorage Water & Wastewater Utility (AWWU) tapped this aqueduct and connected a 7.8-mile-long transmission main (intake portal) to provide water from Eklutna Lake to the Eklutna Water Treatment Facility. A 22-mile-long water transmission main was constructed to distribute the treated water from Eklutna to Chugiak, Eagle River, and on into Anchorage.

### **Anchorage Sewer Utility History**

The Alaska Engineering Commission first installed sewers in downtown Anchorage in 1916 along the lower bluff near the Alaska Railroad Depot. As Anchorage grew, construction of sewers continued and by the end of World War II, sewers were available in much of the area between Ship Creek and Chester Creek, west of Cordova Street. The Greater Anchorage Area Borough (GAAB) was created in 1964 and was granted area wide sewer authority. The last major private sewer utility was acquired by the GAAB in 1972. Investment by the GAAB in the 1970's constructed the J.M. Asplund Wastewater Treatment Facility (WWTF) for Anchorage, the Girdwood Wastewater Treatment Facility and the Eagle River Wastewater Treatment Facility. The wastewater utility is now owned and governed by the Municipality of Anchorage after unification of the City of Anchorage and the GAAB on September 15, 1975. The rivers, creeks, and inlets downstream from Anchorage's wastewater treatment facilities are not adversely impacted by treated effluent, which is AWWU's principal measure of success. The Anchorage community benefits from the superior operation of the three wastewater treatment plants that serve its growing population. Anchorage's public wastewater utility has grown into an enterprise with a net plant in service of approximately \$767 million, treating an average of 32 million gallons of effluent each day.

### **Governance**

AWWU has a seven-member Board of Directors as codified in Anchorage Municipal Code section 4.80.020. The Board is appointed by the Mayor to staggered 3-year terms, with nominees subject to the approval of the Anchorage Assembly. The Board, by code, makes recommendations to the Mayor, establishes procedures for customer complaints, and recommends changes in code to the Assembly that the Board deems necessary or desirable for the efficient operation of the Utility or for the benefit of its customers. The authority for operation and management of the Utility is under the control of the Mayor. The Board members are very experienced professionals in the fields of law, finance/accounting, engineering, and public health, in addition to 2 at-large citizen members, and 1 represented AWWU employee. Regular meetings are held monthly and are open to the public. Board meetings focus on Utility operations and highlights.

### **Economic Regulation and Accounting**

Since 1970, both the Anchorage Water Utility (AWU) and the Anchorage Wastewater Utility (ASU) have been regulated by the Alaska Public Utilities Commission, which was renamed the Regulatory Commission of Alaska (RCA) on July 1, 1999. AWU and ASU each hold a Certificate of Public Convenience and Necessity for serving portions of the Anchorage Bowl, Eagle River and Girdwood. The RCA must approve all rates and tariffs prior to implementation. They also regulate service areas and service quality. The RCA is composed of five members appointed to six-year staggered terms by the Governor of the State of Alaska and confirmed by the State Legislature.

AWWU is an Enterprise Fund. Enterprise Funds are used to account for operations where costs of providing services to the general public on a continuing basis are financed or recovered primarily through user charges or where the governing body has decided that periodic determination of revenues earned, expenses incurred, and/or change in net assets is appropriate for capital maintenance, public policy, management control, accountability or other purposes.

AWWU applies all applicable provisions of the Governmental Accounting Standards Board which has authority for setting accounting standards for governmental entities. The accounting records of the Utility conform to the Uniform System of Accounts prescribed by the National Association of Regulatory Utility Commissioners. The accrual basis of accounting is used for Enterprise Funds. Revenues are recognized in the accounting period in which they are earned and become measurable. Expenses are recognized in the period incurred, if measurable.

AWWU's audited financial statements are available at [Financial Statements | Anchorage Water and Wastewater Utility \(awwu.biz\)](https://www.awwu.biz)

### **Environmental Regulation**

AWU's activities are dictated by a wide variety of environmental regulations administered by the Environmental Protection Agency (EPA) and the Alaska Department of Environmental Conservation (ADEC). Potable water produced by AWU must comply with the regulations promulgated under the Safe Drinking Water Act (SDWA). The SDWA is the main federal law governing the quality of drinking water in the United States. The ADEC has authority (primacy) to administer the SDWA regulations for the EPA. The SDWA sets standards for the chemical and microbial quality of drinking water and establishes requirements for informing the public.

ASU's activities are also dictated by a wide variety of environmental regulations administered by the EPA and the ADEC. All wastewater discharges must comply with the regulations promulgated under the Clean Water Act (CWA). The CWA is the main federal law governing discharges into the waters of the United States. The CWA requires that each treatment facility have a unique National Pollution Discharge Elimination System (NPDES) permit that specifies the discharge limits from each facility for a wide variety of chemical and biological constituents. The ADEC has authority (primacy) to issue and administer the NPDES permits for ASU's Eagle River and Girdwood WWTFs. Authority to issue and administer the 301(h) modification for the Asplund WWTF has been retained by EPA, due to the special conditions of this discharge as outlined in section 301(h) of the CWA. In addition to the CWA laws, ASU's sewage sludge incinerator must also comply with the provisions specified in Title V of the Clean Air Act (CAA). ADEC has primacy for the CAA and administers the permit for EPA.

Failure to comply with the regulations promulgated under the SDWA, CWA and CAA can result in fines and/or compliance orders and criminal charges.

## Physical Plant

The John M. Asplund WWTF is one of the few facilities in the nation operating as a primary treatment facility under Section 301(h) of the Clean Water Act. The primary treatment provided by this facility removes up to 46% of the biological oxygen demand and 80% of the solids from the influent wastewater meeting the criteria necessary for discharge to the marine waters of Cook Inlet.

The smaller Eagle River WWTF and Girdwood WWTF provide advanced secondary treatment prior to discharge to Eagle River and Glacier Creek, respectively. These facilities remove up to 99% of the pollutants from the incoming wastewater prior to discharge.

In 2022, the Asplund WWTF treated an average of 30.23 million gallons per day (mgd). The Eagle River WWTF treated an average 1.42 mgd and the Girdwood WWTF treated an average 0.43 mgd. The three facilities have a combined design capacity of 61.1 mgd. The wastewater collection system has approximately 762 miles of pipes.

The Asplund Facility, built in 1972, is Alaska's largest wastewater treatment plant. As wastewater treatment technology and the demands of community growth have developed over the last two decades, utility operators and engineers have kept pace. The Asplund plant underwent major renovations in 1982 and expanded and upgraded again in 1989.

A facilities plan update was prepared in 1999. The 1999 facilities plan evaluated the existing condition of the Asplund facility and identified improvements necessary to meet the future needs of the community. The facilities plan identified over \$40 million worth of improvements to the solids handling, headworks, administration, laboratory, incineration, thickening processes and control and power systems. AWWU undertook a majority of the recommended Asplund projects. These projects, along with careful operation, have made Asplund a modern, state-of-the-art treatment facility. In 2014, an updated facilities plan was prepared for Asplund. The plan recommended over \$17M of additional investment in Asplund over ten years' time to rehabilitate and maintain aging infrastructure. A significant portion of those recommendations have been completed since 2014. ASU continues to maintain its smaller treatment plants. Additional projects at Eagle River and Girdwood are underway, all designed to replace, rehabilitate, and provide for the near-term needs of the areas being serviced.

AWU's three sources of water are Eklutna Lake, Ship Creek and groundwater accessed through a system of wells in the Northern Communities, the Anchorage Bowl, and Girdwood Valley. Eklutna Water Treatment Facility and the wells which supply Girdwood are operated year-round and serve as the primary supply sources for the two water systems. The Ship Creek Water Treatment Facility and the remainder of water wells are used to augment the primary water supply as well as provide redundancy to the Eklutna source for Eagle River and the Anchorage Bowl.

Of these sources, the Eklutna WTF now provides, on average, 92 percent of total water production for the Northern Communities and the Anchorage Bowl. In Girdwood, where system demand constitutes less than 2 percent of AWWU's total water production, all water produced and distributed is from two wells.

Projects to maintain the surface water plants and AWU wells are on-going. The purpose of these projects is multiple fold: to rehabilitate and upgrade facilities where equipment has reached the end of its useful life; to automate and increase operational efficiency of facilities; to increase yield from existing well sites; and to meet stricter federal and state regulations regarding water quality.

Visit the AWWU website at: <https://www.awwu.biz/>

## **Anchorage Water & Wastewater Utility Highlights and Future Events**

### **Infrastructure Resiliency**

With the uncertainty of national economic conditions, the utility is seeing a positive return on several key efforts that increase our service resiliency such as efficient treatment process upgrades at Asplund Wastewater Treatment Facility and Utility Asset Management Software. In 2021 Asplund Wastewater Treatment plant increased the storage capabilities from 13,500 gallons to 53,300 gallons for the chemical sodium hypochlorite produced at the facility. The increased storage of the chemical largely eliminated the need for purchase of the chemical, meaning the utility is less susceptible to supply chain concerns.

In addition, AWWU has increased the integration and capacity of asset management analyses and planning with our operational and capital efforts. The increased investment in programmatic condition assessment of the water and sewer systems provides up-to-date status of equipment and components allowing for analyses in the Utility's Asset Management Information System (AMIS). This AMIS software checks the condition of assets against the asset management policies of the utility to replace or rehabilitate assets on a risk and needs basis, as opposed to age. This enhanced data capture and analyses extends the life of capital assets, in consideration of operational offsets.

### **Inflation**

Inflation has affected the utility in many areas, but particularly chemicals, fuel, and utilities.

### **Staffing**

As is happening at a national level, finding qualified applicants has been a challenge to the utility. This has caused delays in needed activities such as preventative maintenance potentially costing the utility more money in the future. AWWU is continuing to work with the Municipal Administration to recruit and retain qualified employees.

### **Supply Chain**

Some pumps, motors, electrical and instrumentation equipment, and other items have been a challenge to receive due to global supply chain issues.

### **Federal Infrastructure Loans and Grants**

Congress has authorized infrastructure grants/loans throughout the nation. Much has been targeted toward Water and Wastewater Utilities. Most of these funds will run through the State's Revolving Loan program administered by the Alaska Department of Environmental Compliance. By the current definition of "Disadvantaged Community," AWWU does not qualify for grants or loan forgiveness. AWWU is in ongoing discussions with the State of Alaska to qualify for grant and loan forgiveness.

### **Cybersecurity**

The utility industry and AWWU have been declared critical infrastructure and will likely continue to endure cybersecurity threats for the foreseeable future. AWWU has been proactive in planning and implementing measures to prevent, protect, and mitigate any current potential threat. In 2022 and beyond this will require AWWU to continue to acquire and implement the necessary goods and services required to maintain the utility's cybersecurity. The utility will look for and identify one-time opportunities aligned with the utility's implementation of

cybersecurity as well as monitor and identify any reoccurring cybersecurity expense that may qualify for special funding.

#### Rate Increases Requested and Approved

	Calculated Rate Increases		Requested Permanent Rate Increases		Approved Rate Increases		Comments

2022	-	-	1.75%	3.75%	1.75%	3.75%	
2023	-	-	-	-	-	-	AWWU filed Plant Replacement Improvement Surcharge Mechanism (PRISM) rates of 1.85% for AWU and 0.81% for ASU. PRISM was approved by Regulatory Commission as filed.
2024	9.05%	4.88%	3.00%	3.00%	TBD	TBD	Rate case not yet filed, calculated rate increases reported are subject to change as the revenue requirement study work is still in process.

To improve its debt position, AWWU must continue to request reasonable rates while controlling expenses. The budget provided in this package provides just such a balance.

\*The Plant Replacement and Improvement Surcharge Mechanism (PRISM) is an alternative rate recovery mechanism permitted under Alaska state regulations pursuant to 3 AAC 52.800 through 3 AAC 52.890. Water and wastewater utilities are permitted to implement a surcharge to recover eligible capital costs completed and placed in service between general rate cases (Revenue Requirement Studies). PRISM rates are reset to 0% when a Revenue Requirement Study impacting service rates is filed with the Regulatory Commission of Alaska.

## **Anchorage Water & Wastewater Utility External Impacts**

### **Wastewater Treatment Facilities Discharge Permits**

The State of Alaska Department of Environmental Conservation (ADEC) assumed authority for permitting wastewater discharges for the Girdwood and Eagle River Wastewater Treatment Facilities (WWTF) in November 2008. The Girdwood WWTF permit has been administratively extended by ADEC and continues to be effective and enforceable until a new permit is issued. The Eagle River WWTF permit was reissued by ADEC in 2020 and is valid for at least five years.

Authorization of discharge into marine waters from the Asplund WWTF remains under the auspices of the U.S. Environmental Protection Agency (EPA). The EPA is currently evaluating the Utility's application for reauthorization of the permit allowing only primary treatment, in accordance with criteria set out in Section 301(h) of the Clean Water Act. Subsequent to the agency's determination that the Asplund discharge meets the 301(h) criteria, EPA will consult with the National Marine Fisheries Service (NMFS) on the effects of the permit reauthorization on endangered species (i.e., the Cook Inlet beluga whale). If NMFS finds that the discharge reauthorization is likely to jeopardize continued existence of the species or adversely modify critical habitat, NMFS may impose conditions on the permit to mitigate the effects on the species. AWWU is working with the EPA on permit renewal with ongoing efforts including additional data collection, mixing zone study, and other efforts to support the permit renewal.

### **Infrastructure**

The infrastructure required to provide reliable water and sewer service requires continual annual capital investments to maintain expected service levels and prudently mitigate long term risk. Anchorage Water and Wastewater Utility (AWWU) continuously evaluates Anchorage Water Utility and Anchorage Sewer Utility assets using industry standard best management practices through our asset management program which identifies the need for specific capital projects. In this program, AWWU performs extensive condition assessment monitoring and evaluation using both AWWU staff and specialized contractors. This work culminates in business case analyses that best determine solutions offering the lowest overall life cycle costs.

The November 2018 earthquake was an empirical data point that exhibited the benefit of successful strategic investments made by AWWU over the last decade. While the earthquake did cause significant damage to AWWU systems, operations staff were able to maintain uninterrupted and reliable water and wastewater services through that catastrophic event. As such, AWWU has begun to modestly scale back capital investment.

### **Per- and Poly-Fluoroalkyl Substances (PFAS)**

PFAS are known as forever chemicals and have been identified as a public health and environmental issue facing communities across the United States. PFAS have been manufactured and used in a variety of industries in the United States and around the globe since the 1940s, and they are still being used today. Because of the duration and breadth of use, PFAS can be found in surface water, groundwater, soil, and air—from remote rural areas to densely-populated urban centers. A growing body of scientific evidence shows that exposure at certain levels to specific PFAS can adversely impact human health and other living things. Standards have not been fully developed but may be an issue for AWWU into the future. Tests to date show a low amount in the wastewater. Tests to date of AWWU's surface water treatment facilities do not detect these compounds. Tests to date of all AWWU high production groundwater wells detected measurable quantities of these compounds in three wells in the

Anchorage Bowl. Test results from two of the three wells are below the proposed drinking water standard and one exceeds the proposed drinking water standards. AWWU has implemented management controls on these three wells; completely removing from service the well with PFAS quantities above the proposed drinking water standard.

## **Anchorage Water & Wastewater Utility Capital Overview**

### **Capital Project Selection Process**

Anchorage Water and Wastewater Utility (AWWU) continuously evaluates Anchorage Water Utility (AWU) and Anchorage Sewer Utility (ASU) assets using industry standard best management practices which identify the need for capital projects. As assets age and deteriorate over time they become problematic and either disproportionately lower customer levels of service, have disproportionately high operations and maintenance cost, or increase risk liability. Capital project expenditures address one or more of these issues. The typical origin of capital projects is from facility plans, asset management plans, master plans, or day to day operations. AWWU has the following types of capital projects:

- Water Treatment Facility Plant
- Water Transmission or Distribution
- Sewer Trunk or Collection System
- Wastewater Treatment Facility Plant
- Other Facilities and Plant not directly involved:
  - The treatment of raw water or delivery of finished water
  - The collection or treatment of sanitary sewer
- Miscellaneous Equipment (non-dedicated to a specific facility or location)
- Facility Plans and Master Plans
- Information Technology Hardware and Software
- Vehicles

For an issue of concern, not previously identified, to become a capital project listed above, AWWU develops a Business Case Evaluation (BCE) which summarizes the concern, identifies alternative solutions, and calculates the risk matrix score. AWWU uses a standardized risk matrix to score different aspects of potential projects like safety, security, criticality, customer needs, maintenance requirements, and financial benefit. The matrix score produces a risk number so projects in different categories can be compared (i.e., Water Treatment Facility Plant project vs. Information Technology Hardware and Software project). AWWU takes these justification documents (BCE and matrix score) and in conjunction with the long-range financial plan, selects which capital projects to move forward and schedules them within the 6-year Capital Improvement Program.

### **Significant Projects**

Water Treatment Facility Plant Projects include improvements and equipment for the Eklutna Water Treatment Facility, Ship Creek Water Treatment Facility, and any source water improvements including wells or well sites.

Wastewater Treatment Facility Plant Projects include improvements and equipment for the Eagle River Wastewater Treatment Facility, Asplund Wastewater Treatment Facility, Girdwood Wastewater Treatment Facility, and Septage Receiving Stations.

Water Transmission and Distribution System Projects are any improvements to the pipe network of the distribution system from Eklutna Lake to Potter Valley in Anchorage and the distribution system in Girdwood.

Sewer Collection System Projects are any improvements to the pipe network of the sanitary sewer collection systems in Eagle River, Anchorage, and Girdwood.

Sewer Pumping Plant Projects are any improvements to the sanitary sewer pumping facilities in Eagle River, Anchorage, and Girdwood.

For both AWU and ASU, general and intangible plant improvements are broken into the following projects:

- Facility and Master Plans
- Information Technology Hardware and Software
- Other Plant and Facilities include improvements to those facilities not directly associated with:
  - The treatment of raw water or delivery of finished water
  - The collection or treatment of sanitary sewer
- Miscellaneous Equipment (non-dedicated to a specific facility or location)
- Vehicles

A portion of annual capital funding is reserved for unplanned projects in any of the aforementioned categories and unanticipated coordination due to unplanned projects of agencies such as the Alaska Department of Transportation and Public Facilities or MOA Project Management and Engineering.

### **Impacts on Future Operating Budgets**

One of the overarching goals of AWWU is to balance the ratepayer's expected level of service while maintaining reasonable rates. Rates are a function of both capital spend and annual operating expenses. One of the intents, among many, of the Capital Program is to decrease long term operating expenses. Other objectives of the Capital Program, such as risk mitigation, level of service adjustment, and parity replacement of existing infrastructure do not materially impact future operating budgets. The balance between current capital spend and future operating budgets is a function of AWWU's long-range financial plan that identifies the available capital funding in consideration of anticipated operational costs. AWWU's project selection process prioritizes the greatest operational cost savings for the ratepayers given prudent utility industry practices.

**Eagle River Wastewater Treatment Heating, Ventilation, and Air Conditioning and Safety Improvement**

<b>Project ID</b>	ASU2022005	<b>Department</b>	Anchorage Wastewater Utility
<b>Project Type</b>	Improvement	<b>Start Date</b>	January 2028
<b>District</b>		<b>End Date</b>	December 2030

**Community Council**

**Description**

Install fiberglass infill panels to reduce openings between rails to less than 4-inch on-center wherever public access is expected in the Eagle River Wastewater Treatment Facility. Install additional emergency lights and illuminated exit signs in Building 2, additional lighting and new illuminated exit signs. Upgrade Personal Address (PA) system components to restore full functionality of the PA system. Replace the heating, ventilation, and air-conditioning (HVAC) systems in Building 1 including in the admin area, garage/shop areas and process areas. Replace unit heaters in the process area and relocate for better access for maintenance. Replace the HVAC systems in Building 2 including the unit heaters, makeup air units, fans and dampers. Reconfigure the boiler vent piping to prevent frosting of the air intakes in Building 4.

**Eagle River Wastewater Treatment Facility Biological Process Improvements**

**Project ID** ASU2022015 **Department** Anchorage Wastewater Utility  
**Project Type** Improvement **Start Date** January 2028  
**District** **End Date** December 2030

**Community Council**

**Description**

Install wye cleanouts, and/or manholes on the existing 48-inch primary effluent pipeline at Eagle River Wastewater Treatment Facility that will enable access to the pipeline interior by the sewer crews and their jetting equipment. Periodic cleaning would help assess whether the 48-inch primary effluent line is a contributing factor for excessive filamentous growth. Rehabilitate the gravity thickener, procure spare primary thickened sludge pump components, and replace the panel equipment serving the existing gravity belt thickeners.

**Project ID** ASU2022006 **Department** Anchorage Wastewater Utility  
**Project Type** Improvement **Start Date** January 2028  
**District** **End Date** December 2030

**Community Council**

**Description**

Install channel inserts or use pressurized water to aid in grit removal from the influent channel in Building 4 of the Eagle River Wastewater Treatment Facility. Reduce the noise produced by the standby generator by installing acoustic panels or similar materials on the walls of the generator room and improve the seals on the existing doors. Install customized and prefabricated fiberglass enclosures around odor control fans in Building 1 and Building 4 to retain maintenance access to the fan equipment while significantly reducing the noise. Replace doors, frames, and hardware in Building 2 and add area heater to seasonally direct heated air at interior of double doors to prevent frost formation and maintain door operability. New door equipment and hardware should be selected for corrosion resistance. Replace the vertical ladder access to the mezzanine in the mechanical room with a ships stair to provide safer access to air handler units. Remove the curb and gutter in front of Building 2 and replace with small drainage ditch/channel to improve drainage away from building, repair existing storm water culverts, and address the drainage on the west side of Building 1.

<b>Project ID</b>	ASU2022004	<b>Department</b>	Anchorage Wastewater Utility
<b>Project Type</b>	Improvement	<b>Start Date</b>	January 2028
<b>District</b>		<b>End Date</b>	December 2028

**Community Council**

**Description**

Replace Square D Motor Control Centers (MCC) with Allen-Bradley Motor Control Centers at Eagle River Wastewater Treatment Facility. Replace all branch panels and relocate transformers feeding the three panels in the garage/shop to allow code-compliant clear working space in front of the panels. Replace MCC-1 and MCC-1X in Building 1, and MCC-2X in Building 2. Replace the branch panel equipment in Buildings 1 and 2 and add a third branch panel to Building 2 to allow for future expansion. Install additional emergency lights and illuminated exit signs in Building 2, to meet the minimum lighting level requirements along paths of egress. Replace all existing fluorescent and metal halide fixtures with new LED fixtures which will improve lighting levels and the overall quality of light, as well as provide substantial energy savings.

**Eagle River Wastewater Treatment Facility Tertiary Filter Improvements**

**Project ID** ASU2022007 **Department** Anchorage Wastewater Utility  
**Project Type** Improvement **Start Date** January 2028  
**District** **End Date** December 2030

**Community Council**

**Description**

Replace sand filter at Eagle River Wastewater Treatment Facility with compressible media filters, disk filters or pile cloth filters. These options fit in a smaller footprint which allows for greater hydraulic capacity, process redundancy, and will reduce or eliminate the need to bypass the tertiary filter for caustic cleaning. Cloth pile filter media could be replaced by Anchorage Water & Wastewater Utility personnel when needed.
